CAD Design

Online Primary jewelry design with computer course

In this course students learn how to make a piece of jewelry by using a computer software in 3D shape and following jewelry making standards, setting and Casting. With computer and technology enhancements, plenty of powerful software pieces were made in order to make designing easier and in this course gemvision matrix is thought for jewelry design.

This software has been made specifically for jewelry designing and that's why learning and working with this software is easy. This software is currently one of the best jewelry design with computer software that's

being thought as the main software in well-known universities and institutions such as GIA in United States.

For taking part in this course there is no need for you to take part in jewelry and gold making courses or even to know how to hand draw sketches. The only thing you need for this course is to know how to work with computer and windows and it means being able to handle ordinary tasks with windows. Also having an intermediate or higher command of English language helps to learn this field.

Primary jewelry design with computer course topics

Teaching source for this course is “jewelry design with computer volume 1” written by seyed mohammad mortazavi this course’s tutor. this book is the first written book in this field in Iran and is the world’s 3rd book in jewelry design with computer that’s been thought in numerous universities and institutions such as Tehran university, university of applied science and technology, beheshti university and in technical and vocational training center, it also has been republished for the 4th time.

This book has 270 full color pages and has around 1800 pictures! This means in average there are 7 pictures in each page which has made learning the book’s materials easier. this book is in fact the most impeccable source for learning jewelry design with computer in the country and the second book is called “jewelry design with computer 1 & 2”.
